It is encoded by a fragment of DNA clone Cl1-El2. It can be used to prepare antibodies which can be used to detect NANB hepatitis with extremely high accuracy. It can also be used to detect anti-NANB hepatitis antibodies. See also AAR20609-R20615 and AAR20713-R20723.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This sequence is the product of the genome of the non-A, non-B hepatitis virus (NANBHY) strain HC-74. This sequence was derived from the DNA sequence which was derived by amplification by polymerase chain reaction. The nucleotide sequences derived from this amplification can be used to detect NANBHY infection which could not be detected by conventional methods. The detection kits allow highly specific and sensitive detection at an early phase of infection. This polypeptide sequence can be used for the manufacture of vaccines and immunological pharmaceuticals and also to produce antibodies specific
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Recombinant cDNA of NANBH virus strain peptides - useful for diagnosis and in pharmaceuticals

                                                                                                                                                                                           This protein may be expressed in an insect or animal cell culture. The produced ectoprotein can be used in a vaccine and for the diagnosis of HCV infection with high specificity and sensitivity.

This protein is encoded by the infectious hepatitis C virus (HCV) composition of the protein is encoded by the infectious hepatitis C virus (HCV) composition of the produce of the produce chimeric genomes (see AAX24833). HC-J4 was obtained containing HC-J4/91. The infectious nucleic acid sequence can be used to produce chimeric genomes (see AAX24833) consisting of the open reading frames of infectious nucleic acid sequences of other genotypes (including genotypes 1-6) and subtypes (such as 1b, 2a, 2b, 2c, 3a, 4a-f, 5a and 6a) of HCV. The invention also relates to the introduction of mutations or deletions into infectious nucleic acid sequences in order to produce an attenuated HCV virus suitable for vaccine development. Infectious nucleic acid sequences can also be used to produce attenuated virus via passage in vitro or in vivo of the viruses produced by transfection of a host cell with the infectious nucleic acid sequence. Vaccines comprising one or more polypeptides made from the infectious nucleic acid sequence are used to immunise mammals, especially humans, against hepatitis C. The nucleic acid sequences can also be used to induce protective immunity against the virus. The nucleic acid sequences or their encoded proteases (e.g. NS3 protease) can additionally be used to develop screening assays to identify antiviral agents for HCV.

                             Alignment
                                                                                                                      genome, specifically bovine viral diarrhoea virus (BVDV) genome in which the (non-)structural region has been replaced by the (non-)structural region of a hepatitis C virus (HCV) genome. The nucleic acids comprising the chimeric virus and the chimeric virus are useful for identifying cell lines capable of supporting the replication of these chimeric viruses, in screening for neutralizing antibodies to HCV of different genotypes, in the production of HCV-BVDV virions, for the development of inactivated or attenuated vaccines to prevent HCV-BVDV in a mammal, in studying the melecular properties of HCV indirectly in vitro, and in identifying inhibitors of viral enzyme activity which would be useful as antiviral agents. Formulations or compositions comprising the

Nucleic acid construct of the invention cc is useful for detecting the presence of an RNA virus in a cell. It is calso useful for screening anti-viral drugs and determining drug cresistance of an RNA virus. The present sequence is Hepatitis C virus cx (HCV) isolate HCV-S1 full-length polyprotein.
                                                                                                                                                                                                                                                                                                                                                                                                                      Local Similarity:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁
comprises the nonstructural region of infectious genotype la strain comprises the nonstructural region of infectious genotype la strain comprises the nonstructural region of infectious genotype (CC ib strain HC-74 (see AAW98021). The construction of such chimeric comcleic acid sequences is expected to be of importance in studying complete the growth and virulence properties of HCV and in the production comprises of HCV. The invention also relates to the introduction comprises of HCV. The invention also relates to the introduction comprises of HCV. The invention also relates to the introduction composed to the introduction composed to include the produce an attenuated HCV virus suitable for vaccine comproduce an attenuated HCV virus suitable for vaccine comproduce attenuated virus via passage in vitro or in vivo of the composed to immunise mammals, especially humans, against hepatitis C. The nucleic acid sequences can also be used to immunise mammals, especially humans, against hepatitis C. The nucleic acid sequences or their composed proteases (e.g. NS3 protease) can additionally be used to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   esent invention relates to GB virus-B. The nucleic acid invention are useful for indirectly studying the molecuties of hepatitis C virus (HCV). The infectious nucleic ce of the GB virus-B clone and the HCV/GBV-B chimeras me development of vaccines and therapeutics for HCV.

                                                                                                                                                                                                                                                                                                                                                                                                          The sequences given in AAR25854-74 are hepatitis C virus protiens. The genes encoding these proteins can each be used to prepare recombinant vectors by ligating the gene of interest in to a vector recombinant vectors by ligating the gene of interest in to a vector recombinant vectors by ligating the gene of interest in to a vector recombinant vectors by ligating the gene of interest in to a vector recombinant vectors by ligating the gene of interest in to a vector recombinant vectors by ligating the gene of interest in to a vector recombinant vectors by ligating the gene of interest in to a vector recombinant vectors by ligating the gene of interest in to a vector recombinant vectors by ligating the gene of interest in to a vector recombinant vectors by ligating the gene of interest in to a vector recombinant vectors by ligating the gene of interest in to a vector recombinant vectors by ligating the gene of interest in to a vector recombinant vectors by ligating the gene of interest in to a vector recombinant vectors by ligating the gene of interest in to a vector recombinant vectors by ligating the gene of interest in to a vector recombinant vector vector vectors.
                                                                                                                                                                                                                                                                                                                                                                                                    to be expressed in E. coli. These polypeptides diagnostic reagents for type C hepatitis and the efficiently by recombinant methods.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Hepatitis C virus antigen expressed as recombinant in useful for diagnosis of hepatitis C virus infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       (TOKU
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Hepatitis C virus

```

The sequences given in AAR25876-95 are encoded C virus genes of the invention which have been coli vector. These polypeptides are useful as for type C hepatitis and they may be produced e

d by the claimed hepatitis
n inserted into an E.

Sequence 8, Application US/08927597;
Patent No. 6245503;
GENERAL INFORMATION:
APPLICANT: MAERTENS, GEERT
APPLICANT: BOSMAN, FONS
APPLICANT: BUSE, MARIE-ANGE
APPLICANT: BUYSE, MARIE-ANGE
TIPLE OF INVENTION: PURIFIED HE
TITLE OF INVENTION: PROTEINS FOR NUMBER OF SEQUENCES: 111
                                                                                                                                                                                                                                                                                                                                       Q
                                                                                                                                                                                                                                                                                                                                                                                           밁
                                                                                                                                                                                                                                                                                                                                                                                                                              Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Qy
